PROFESSIONAL SUMMARY

Final-year Computer Engineering student (AI Specialization) with hands-on experience building and deploying a full-stack MERN production application end-to-end, including feature development, technical SEO, security hardening, and performance optimization. Solved 156+ DSA problems on LeetCode (Java). Seeking an SDE / Full Stack Developer role to apply strong fundamentals in data structures, web development, and system design.

EDUCATION

Parul University, Vadodara

2022 – 2026

B.Tech in Computer Engineering (AI Specialization) — CGPA: 7.08 / 10

Diploma in Computer Engineering — MSBTE

2022

Percentage: 78.69%

Secondary & Senior Secondary Education

Class XII: 46.40% | Class X: 40.20%

TECHNICAL SKILLS

Languages: Java, JavaScript

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, REST APIs

Database: MongoDB, MongoDB Atlas

Tools & Platforms: Git, GitHub, Vercel, Railway, Cloudinary, Google Analytics (GA4), Google Search Console, Semrush

Core Concepts: Data Structures & Algorithms, System Design Basics, Technical SEO, Web Security, Performance Optimization

PROJECTS

Readify AI — Full-Stack Book Reading Platform (MERN)

readifyai.vercel.app

Solo Developer | Prabhat Production

- Designed and deployed a full-stack production application solo, featuring an EPUB reader, highlight & annotation system, reading-progress tracking, ratings/reviews, and streak calendars.
- Built an admin analytics dashboard with Recharts, CSV bulk-import pipeline, and a blog CMS using the TipTap rich-text editor with Cloudinary integration.
- Improved Google PageSpeed score from 57 to 86 by implementing code-splitting, React.lazy(), and dynamic imports.
- Diagnosed and resolved critical SEO/crawling issues — fixed 404s via 301 redirects, corrected canonical URL misconfigurations, and resolved Prerender.io rendering failures on Vercel.
- Hardened application security with Helmet.js, rate limiting, strict CORS policies, and DOMPurify-based XSS protection; identified and fixed IDOR vulnerabilities.
- Drove organic traffic growth through technical SEO audits using Google Search Console and Semrush, paired with a blog content strategy tracked via GA4.

Smart Parking System — Final Year Project

YOLOv8, Node.js, Express, React

- Built an AI-powered smart parking detection system using YOLOv8 for real-time vehicle and parking-slot detection.
- Developed a full-stack interface with a Node.js/Express backend and React frontend to display live parking availability.

Telegram Blog Automation Bot

SerpAPI, Groq API (LLaMA-3.3-70B)

- Built an automated research-and-writing bot that generates blog content using SerpAPI for research and the Groq LLaMA-3.3-70B model for writing, with inline Telegram button controls.

Traveloop — Travel Planning Application

React, Node.js

- Built a travel-planning web application enabling users to explore destinations and organize trip itineraries.

ACHIEVEMENTS

- Solved 156+ Data Structures & Algorithms problems on LeetCode (Java), covering Arrays, HashMaps, Two Pointers, Sliding Window, and Prefix Sum techniques.
- Independently built, deployed, and scaled a production-grade full-stack application (Readify AI) from concept to live users.
